PROJECT REPORT

◇ Title:

Student Performance Prediction using Machine Learning

◇ 1. Introduction

In today's academic environment, students often struggle to understand how their habits affect performance. This project aims to predict student marks using machine learning.

◇ 2. Objective

To build a model that predicts marks based on:

Study hours
Sleep hours
Attendance

◇ 3. Methodology

Dataset created manually
Data processed using Pandas
Model used: Linear Regression
Data split into training and testing

◇ 4. Implementation

Loaded dataset

Trained ML model
Evaluated accuracy
Predicted marks using user input

5. Challenges

Creating dataset
Understanding ML model
Improving accuracy

6. Conclusion

This project shows how machine learning can help predict student performance. It helped in understanding real-world ML applications.
